Indexing Searching
Searching big text corpora

2.6 20.0 20.6 20.6

Corpus:

- \blacksquare positional attributes word form, lemma, PoS tag, \dots
- structures and structure attributes documents (e.g. with author, id, year, ...), paragraph, sentence
- $\blacksquare \ searching: \ Manatee/Bonito/Sketch \ Engine$
- http://corpora.fi.muni.cz
- \blacksquare http://the.sketchengine.co.uk

Miloš Jakubiček
Indexing and Searching Very Large Text

NLP FI MU Brno

Indexing Searching
Searching big text corpora

- \blacksquare data too big to be stored in memory
- $\hfill\blacksquare$ data too big to be search sequentially
- $\Rightarrow\,$ preprocessing needed (indexing, alias corpus compilation)
- key decisions are:
 - \blacksquare trade off between compile-time (preprocessing) and run-time
 - trade off between in memory and off-memory processing

Notes		
Notes		
Notes		

Notes			

■ may be simplified to inductive definition:

Zipf's law (simplified) $\text{frequency of the } n\text{-th element } f_n \approx \tfrac{1}{n} \cdot f_1$

- $\blacksquare \Rightarrow$ frequency is inversely proportional to the rank according to frequency
- $\ \ \, \Rightarrow$ one needs really large corpora to capture all the variety of many language phenomena
- $\blacksquare \Rightarrow$ implications for text indexing

Indexing Searching
Indexing corpora in Manatee
Key data structures for a positional attribute: lexicon because operations on numbers are just so much faster than on strings corpus text to iterate over positions inverted (reversed) index to give fast access to positions for a given value
Indexing and Searching Very Large Texts
Indexing Searching
How to store integer numbers
 given Zipf's distribution: fixed-length storing very inefficient variable-length more complicated but yielding much smaller and quicker indices variable-length bit-wise universal Elias' codes: gamma, delta codes cf. Huffman coding
ペロ・パタ・イミ・イミ・ ミータへで Miloš Jakubiček NLP FI MU Brno
Indexing and Searching Very Large Texts Indexing Searching Very Large Texts
Indexing corners in Manates
Indexing corpora in Manatee Structures and operations: ■ operations in between: string (str) – number (id) – position (poss) ■ lexicon building: ⇒ word-to-id mapping ⇒ operations on numbers, not strings ⇒ id2str, str2id

Notes	
Notes	
Notes	

Notes

Miloš Jakubíček Indexing and Searching Very Large Texts

■ inverted index: id2poss ■ corpus text: pos2id

 \blacksquare yields transitively also pos2str, str2poss

NLP FI MU Bri

Searching corpora in Manatee

- key idea: operations on sorted forward-only streams of positions
- lacktriangle FastStream single position stream
- RangeStream stream of position pairs (structures: from position, to position)

NLP FI MU Brno

Notes

Notes

CQL

- \blacksquare = Corpus Query Language (Christ and Schulze, 1994)
- positions and positional attributes: [attr="value"]
- structures and structural attributes: <str attr="value"
- example:

[word=".*ing"& tag="V.*"] <doc id="20[5-9].*"</pre>

■ established a within <str/> query:

[tag="N.*"]+ within <s/> and alternative $\bar{\mathtt{meet/union}}$ query:

(meet [lemma="take"] [tag="N.*"] -5 +5) $({\tt union}\ ({\tt meet}\ \ldots)\ ({\tt meet}\ \ldots))$

←□ト←問ト←きト←きトーき りへで NLP FI MU Brno

Miloš Jakubíček

CQL in Manatee/Bonito

- ehnancements and differences to the original CQL syntax
- \blacksquare within <query> and containing <query>
- meet/union (sub)query
- inequality comparisons
- frequency function

Notes		

\triangleleft	\vdash	∢	7	ŀ	 \equiv	\triangleright	\triangleleft	3	\triangleright	₹.	4) a

```
Indexing Searching within/containing queries
```

■ searching for particles:

```
[tag="PR.*"] within [tag="V.*"] [tag="ATO"]? [tag="AJO"]* [tag="(PR.?|N.*)"] [tag="PR.*"] within <s/>
```

searching for a Czech idiom "hnout někomu žlučí" ("to get somebody's goat"):
word-by-word translated as:
hnout "move" [V, infinitive]
někomu "somebody" [N, dative]
žlučí "bile" [N, instrumental].

<s/> containing [lemma="hnout"] containing
[tag=".*c3.*"] containing [word="žlučí"]

Miloš Jakubíček

NLP FI MU Brno

Indexing Searching

within/containing queries

- structure boundaries: begin: <str>, whole structure: <str/>, end: </str>
- changes: within <str> not allowed anymore, use within <str/>

4 D > 4 D > 4 E > 4 E > E 9 Q Q

Miloš Jakubíček
Indexing and Searching Very Large Texts

NLP FI MU Brno

Notes

Indexing Searching

meet/union queries

- combined with regular query: <s/>
 containing (meet [lemma="have"] [tag="P.*"] -5 5)
 containing (meet [tag="N.*"] [lemma="blue"])
- changes: meet/union queries can be used on any position, they can contain labels and no MU keyword is required (and deprecated):

(meet 1:[] 2:[]) & 1.tag = 2.tag

Indexing and Searching Very Large Texts

NLP FI MU Brn

lotes			

Notes				

Indexing	Searching

Inequality comparisons

- former comparisons allowed only equality and its negation: [attr="value"] [attr!="value"]
- inequality comparisons implemented: [attr<="value"]
 [attr>="value"] [attr!<="value"] [attr!>="value"]
- intended usage:

[tag="AJ.*"] [tag="NN.*"] within <doc year>="2009">

■ sophisticated comparison performed on the attribute value: <doc id<="CC20101031B"> matches e.g. BB20101031B, CC20091031B, CC20101030B CC20101031A.

Miloš Jakubíček

Indexing Searching

Fixed string comparisons

- normally the CQL values are regular expressions
- sometimes this is not desirable (batch processing needs escaping of metacharacters)
- new == and !== operator introduced for fixed strings comparison
- no escaping needed except for '" and '\'
- examples: ".", "\$", " "matches a single dot, dollar sign and tilda, respectively, "\n"matches a backslash followed by the character n,

<□> <₫> <≥> <≥> = 90

Miloš Jakubiček
Indexing and Searching Very Large Texts

NLP FI MU Brno

Indexing Searching

Frequency function

■ a frequency constraint allowed in the global conditions part of COL:

1:[tag="PP.*"] 2:[tag="NN.*"] & f(1.word) > 10

<□ > <**□** > < **□** > < **□** > < **□** > < **□** > < **□** > < **□** > < **□** > < **□** > < **□** > < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□** < **□**

Notes			

Indexing Searching

Today's Corpora in Sketch Engine

- \blacksquare LARGE (= billions of tokens, and it's going to be worse)
- \blacksquare complex multi-level multi-value annotation
- wide range of languages
- growing demand on complex searching moving from morphology to syntax and semantics
- search API for automatic information retrieval and post-processing in particular applications needed
